

EDUCATION

- **Military Institute of Science and Technology**
Bachelor of Science in Computer Science 2019 – 2023
- **Adamjee Cantonment College**
Higher Secondary School Certificate 2018
- **Shaheed Bir Uttam Lt. Anwar Girls College**
Secondary School Certificate 2016

EXPERIENCE

DataSoft Systems Bangladesh Limited *Sept 2023 - Present*
Software Developer

- **Clearing House System (Metro Rail-DTCA)** *Laravel, MySQL*
 - Developed and maintained a comprehensive web application (CH Terminal) for Dhaka Transport Coordination Authority (DTCA) to streamline metro rail data analysis, report generation, and transaction monitoring.
 - Implemented core features such as card-wise sales reports, passenger journey summaries, revenue tracking, and settlement analytics, significantly reducing the manual overhead of generating complex reports.
 - Designed features to support daily operational workflows and system maintenance tasks, including modules for TOM device monitoring, status reporting, and transaction log analysis, improving data reliability and operational transparency.
 - Collaborated closely with stakeholders to align report outputs with operational needs, ensuring real-time insights into metro rail usage, financial settlements, and anomalies like missing transactions or blacklisted cards.
- **Rapid Pass Website** *Laravel (PHP)*
 - Developed a user-friendly frontend for the Rapid Pass website, enabling Metro Rail commuters to easily access and manage their travel information.
 - Implemented key user dashboard features such as card information viewing, card reissue requests, and blacklist removal functionality.
 - Enhanced user experience by ensuring smooth navigation and functionality tailored for Rapid Pass cardholders.
 - Collaborated on a large-scale web platform, gaining exposure to admin-side features like complaint and message management and other functionalities.
- **bKash AML** *Angular*
 - Contributed to the development of an anti-money laundering (AML) application to detect and prevent suspicious financial activities through automated transaction monitoring, risk profiling, and rule-based alerting.
 - Engineered the Transaction Monitoring Control and Transaction Risk Profiling modules, enabling the client to track suspicious patterns in real-time and take immediate action, enhancing overall transaction security.
 - Developed dynamic table module and interfaces using Angular, improving usability and supporting flexible rule configurations.
 - Identified and resolved critical bugs across multiple modules, improving system reliability and user experience.
 - Contributed to performance tuning for faster rendering and secure data handling.

PROJECTS

- **Shoppers Stop:** A full-stack e-commerce platform with advanced database engineering, featuring an Admin Panel for order/product management and a Customer Panel for browsing and purchasing.
- **TWIN Robot:** A companion robot for giving company to loner elder people and monitoring their mental health.
- **Autonomous Vehicle Navigation:** Detecting the objects and their distance from the vehicle for navigation. Used ML approach for detecting license plate, extracting the number in text format.

PROGRAMMING SKILLS

- **Technologies:** Laravel, React, Angular, Django **Languages:** PHP, Java, Python, Javascript, C++, SQL
